INSPECTION OF COMMERCIAL FEEDINGSTUFFS

Made for the STATE DEPARTMENT OF AGRICULTURE

The Commissioner of Agriculture administers the New Hampshire Commercial Feedingstuffs Law. Every individual or firm expecting to sell feed products in New Hampshire should obtain a copy of the leaflet "New Hampshire Commercial Feed Law and Rules and Regulations." Requests for this leaflet and all inquiries concerning the law and the registration of feedingstuffs should be addressed to the attention of the Feed Control Supervisor, State House, Concord, New Hampshire.

In carrying out the provisions of the law during the fiscal year ending June 30, 1956, 702 official samples were collected under the direction of Honorable Perley L. Fitts, Commissioner of Agriculture. The samples which were collected by the Control Supervisor, Mr. George H. Laramie and the Assistant Control Supervisor, Mr. Harold Ayer, were submitted to this laboratory for analysis. In addition to the authors, credit should be given to Mrs. Fay Becker, Technician in Agricultural and Biological Chemistry for performing a part of the analyses reported in this bulletin.

THE LAW

The New Hampshire Commercial Feed Law, Chapter 226 of the Laws of the State of New Hampshire, conforms closely to the Uniform Feed Bill proposed by the Association of American Feed Control Officials. It is in the best interest of the purchaser of feedingstuffs as well as the feed manufacturer that he become familiar with the requirements of the law.

It is not the purpose of this bulletin to discuss the law in detail, but to point out certain requirements of the law. It is a report of the official analyses of the samples submitted.

Registration: Each brand of commercial feed offered for sale in the state must be registered with the Feed Control Supervisor. Forms are provided for that purpose by his office in Concord, New Hampshire.

The term "commercial feed" refers to "all materials which are distributed for use as feed for animals, other than man, and for wild birds kept in captivity, except (1) unmixed whole seeds, and meals made directly from the entire seeds, (2) unground hay, and (3) whole or ground straw, stover, silage, cobs and hulls when not mixed with other materials."

The feedingstuff is usually registered by the manufacturer or jobber, whether he is located within or outside the state. Feedingstuffs manufactured in other states are frequently handled by several middlemen before they reach the local distributor. Under the provisions of the law, if the manufacturer or jobber fails to make registration, the dealer is responsible. Dealers who purchase feed for resale should assure themselves that the brands they purchase are properly registered and the license fee paid; otherwise, they must assume that responsibility.

Labeling: The law requires that any commercial feed offered for sale, or sold in this state, shall furnish on each package a clearly printed statement certifying:

the number of net pounds in the package

the name and principal address of the person
guaranteeing the commercial feed

the name or brand under which the commercial
feed is sold

the guaranteed analysis, stating:

the minimum percentage of crude protein

the minimum percentage of crude fat

the maximum percentage of crude fiber

the name of each ingredient contained in the feed

In special cases, as in mineral feeds and vitamin supplements, requirements as listed in the law must be met. In the case of bulk deliveries, a written or printed statement of the above information shall accompany delivery.

In order to secure greater uniformity in the labeling of feeds and in the statement of ingredients, the Association of American Feed Control Officials has adopted definitions of ingredients and standards. The Association has approved 20 official regulations which "should be adopted by State Officials insofar as their statutes will permit." There are no conflicts with the New Hampshire law in these regulations. A booklet containing these regulations, together with definitions of ingredients, official and tentative, as well as other instructive material, is for sale at the office of the Secretary of the Association of American Feed Control Officials, College Park, Maryland. If the suggestions and definitions presented in this booklet are followed by the manufacturers, a correct and accepted list of ingredients complying with the law will appear on the tag. Carelessness or indifference in proper labeling of the product offered for sale should create sales resistance on the part of the buyer. An alert purchaser will observe that correct labeling is a mark of a reliable manufacturer.

THE PURPOSE OF THE FEEDINGSTUFFS LAW

The chief purpose of the feedingstuffs law is to protect the consumer against the inferior products which doubtless would soon appear on the market if the trade were not under state control. The law is primarily a correct-labeling act. It must not be assumed by the purchaser that every brand which meets the manufacturer's guarantee is a high-grade feed. The Commercial Feed Law does not prevent the sale of a low-grade feed if it is properly licensed and tagged, and is offered for sale in compliance with the law. It would not be in the public interest to legislate against the sale of the lower-grade by-products. They can be fed profitably if bought at a price adjusted to their feeding value. The law does prevent an inferior feed being offered for sale as a high-grade product.

The dealer, in purchasing feed from the manufacturer, and the consumer in purchasing feed from the dealer, should make the specification

that the feed delivered must comply with the New Hampshire Commercial Feed Law. If the feed is not registered; if the protein, fat, and crude fiber are not guaranteed; and if the ingredients of which the feed is composed are not plainly stated on the bag or on a tag attached thereto, the purchaser is not protected by the law. He has no recourse under the commercial feed law if the feed he purchases is of inferior quality. If the buyer fails to assure himself that the legal requirements have been met, he accepts the feedingstuffs at his own risk.

The cost of a feedingstuffs inspection includes the drawing and analysis of samples, and the publication and distribution of the annual bulletin. The funds from which these costs are paid are accumulated from the license fee which the manufacturer is required to pay annually on each brand registered for sale in the state. A calculation based on the known costs of the inspection and the estimated retail value of the feedingstuffs sold annually, shows that the cost of the inspection is only a fraction of a cent per 100-pound bag.

TERMS USED IN REPORTING ANALYSIS

The terms used in reporting the chemical analysis of a feedingstuff as required by law, are briefly defined as follows: PROTEIN is a collective term for a considerable group of compounds, all of which contain nitrogen. Ingredients high in protein are usually more expensive than the other ingredients, therefore, protein is one of the most important nutrients determining the commercial value of a feedingstuff. The nutritional value of the proteins varies widely; therefore, a feedingstuff should contain protein from several sources to insure inclusion of all essential types. FAT is separated from the other components of a feedingstuff by extracting the moisture-free sample with anhydrous ether. In such ingredients as the cereals, the seed-meals, and animal products, the extract is nearly pure fat. A few ingredients such as alfalfa meal contain some other soluble material which is not fat. When sulphur is present, the "ether extract" or "fat found" is much too high, since sulphur is soluble in anhydrous ether. CRUDE FIBER is composed of cellulose and related compounds. Since crude fibre has little feeding value, the law requires that the maximum fiber be guaranteed rather than the minimum, as in protein and fat.

There are times when it is desirable to determine the moisture or water present in a feed. Any material in contact with the air will absorb or release some moisture depending upon the humidity and the kind of material. Since feeds are in contact with the air and since the moisture content varies somewhat with the moisture of the surroundings, it is the usual custom to report the analysis of a feed on the basis as it is used, rather than on a perfectly dry basis. The ash or total mineral matter content is of value at times and is obtained by burning a sample of the feed until all of the carbon is removed and only the minerals remain. The nitrogen-free extract contains the more soluble carbohydrates such as sugars and certain simple cellulose materials. The term carbohydrates includes the nitrogen-free extract plus the crude fiber. The nitrogen-free extract and carbohydrate content of a feed is determined by calculation after the analysis for certain other constituents. The usual analysis of a feed may

be summarized as follows. In using the following statement, all results must be expressed in terms of per cent.

100 minus the sum of "moisture" + "ash" + "protein" + "fat" + "crude fiber" equals the "nitrogen-free extract." Total carbohydrate equals "nitrogen-free extract" + "crude fiber."

The use of medicated feeds for specific purposes continues to increase. In certain cases it is recommended that a medicated feed be fed to poultry on a continuous basis as a means of preventing a chronic disease condition. In certain other cases, a special ration may be designed to control an outbreak and is fed only a short time. Feeds containing sulfaquinoxaline and nicarbazin have been analyzed for their drug content in this year's inspection. The use of drugs or growth stimulants in feeds is carefully controlled by the Federal Food and Drug Administration. Each use proposal is completely tested before it is permitted in products for the open market, to insure that there will be no injurious effects from its use. Continued research is making it possible to formulate feeds that will produce maximum results for the time and investment represented in a lot of animals, whether it be poultry, hogs or cattle.

OTHER COMMENTS

The use of "bulk delivery" in the handling of feed continues to increase. This method presents special problems in handling to the consumer and the recommendations of the Experiment Station and the manufacturer should be carefully considered. With reasonable care, bulk feed can be handled so that the product, as fed, is as uniform as bagged feed. Samples drawn at various points in the truck and at delivery points indicate that with the observance of proper precautions, a uniform product is supplied the customer.

It is not within the scope of this bulletin to make recommendations regarding the use of commercial feedingstuffs. The Department of Dairy Husbandry and the Department of Poultry Husbandry are continuously studying feeding problems. The following publications of these departments are free to residents of New Hampshire. Address your request to: Mail Service, University of New Hampshire, Durham, New Hampshire.

- | | |
|----------------|--|
| Ext. Bull. 67 | Turkey Production in New Hampshire. |
| Ext. Bull. 114 | Feeding Dairy Cattle. |
| Ext. Cir. 282 | Dairy calves. |

| Sta. Bull. 419 | Effect of Texture on the Nutritive Value of Concentrates for Dairy Cattle. |

While the word "feedingstuffs" does not appear in all the above titles, no publication is included which does not discuss some aspect of the use of feedingstuffs.

Inquiries occasionally are made regarding a method of calculating the protein, fat, or fiber content of a home-mixed feed. There are tables available, such as those in Morrison's book "Feeds and Feeding," which give the average chemical analysis of feed concentrates, roughage and silages. It

should be pointed out that the chemical analysis of a particular lot of an ingredient may be somewhat above or below the average figure shown in the table. This fact must be taken into consideration in fixing guarantees. The following example shows how the protein content of a feed mixture may be calculated.

Ingredients	pounds used	×	per cent protein in ingredient	=	lbs. protein furnished by ingredient
Ground Oats	200		12.0		24
Ground Corn	400		8.0		32
Gluten Feed	300		25.0		75
Wheat Bran	400		15.0		60
Linseed Oil Meal	100		34.0		34
Salt	10	
Total Mix	1410 lbs.		contains		225 lbs. protein

The mixture contains $\frac{225}{1410} \times 100 = 15.95\%$ Protein.

The percentage of fat or fiber may be calculated in a like manner by substituting the fat or fiber figures for those of the protein.

CONFORMITY TO GUARANTEES

The chemical analyses reported in this bulletin were made by methods approved by the Association of Official Agricultural Chemists.

A total of 702 samples were submitted for analysis. Seventy-one brands were sampled two or more times. Table I shows the percentage of samples analyzed each year since 1926 that did not conform to guarantee. The total percentage of samples failing to conform to the guarantee is 7.8% deficient in protein, 8.5% deficient in fat, and 4.0% carried an excess of fiber. In all except very rare cases, the deficiencies were quite small.

Table II lists the analyses of the official samples of ingredients and mixed feeds. Table III lists the analyses of the official samples of dog and cat foods. Both the dry and canned foods are included in this table.

Bold face type and underline of the figure is used to indicate a deficiency of more than 0.5 per cent below guarantee in protein, of more than 0.25 per cent below guarantee in fat and an excess of more than 1.00 per cent above the guarantee in crude fiber.

Eighteen brands of the cat and dog foods were not registered at the time of sampling. Sixty-six brands of the mixed feeds or ingredients were not registered at the time of sampling. They are identified in the tables showing the analyses.

Forty-three of the official samples were drawn from "bulk" lots of feed. They are identified in table II.

The samples containing sulfaquinoxaline and/or nicarbazin were analyzed for the drug content. No serious deficiencies were found.

It is expected that more work will be done in the determination of the drug content of medicated feeds in the future.

TABLE I
PERCENTAGE OF SAMPLES ANALYZED IN
YEARS 1926-1956 NOT CONFORMING TO GUARANTEES

Year	Per cent below guarantee in Protein		Per cent below guarantee in Fat		Per cent high in Crude Fiber
	Less than 0.5 per cent	0.5 per cent or more	Less than 0.25 per cent	0.25 per cent or more	
1926	8.0	16.0	4.0	10.0	6.0

1956	3.9	3.9	2.4	6.1	4.0

REQUEST BY INDIVIDUALS FOR THE ANALYSIS OF FEEDINGSTUFFS

In addition to the official samples of feedingstuffs submitted by the Feed Control Supervisors, the Agricultural Experiment Station each year analyzes some samples drawn by individuals to aid in solving a particular problem. Chemical analysis can aid in certain cases but it should not be expected to answer all questions. A close study of management practises will often answer many problems when the first thing to do seems to be to blame the feed for difficulties in growth or production of livestock. It is suggested that in the case of a difficulty involving feeding that you call in your County Agent, your veterinarian, or the fieldman of your feed supplier to consider your problem. They will then obtain the facts in the case and will determine whether an analysis of the feed will be of help or not.

If a feed sample is mailed or brought to the laboratory, it is essential that the sample drawn, about one pint put in a clean, tight container, *adequately represents* the large lot from which it is drawn and that *full information* concerning the case accompany the sample. If this is not done, it must be supplied before analysis can be made. Because of the cost of laboratory work and materials, the necessity for an analysis is decided upon the basis of information submitted and an opinion obtained as to whether or not an analysis is necessary in the particular case involved. Since this is a state experiment station, this service is available only to residents of the state and no charge is made for occasional work. Many questions that are raised may be satisfactorily answered by correspondence without laboratory work.
